

Preliminary

XGE High Performance Ethernet

XGE4044-XMC-FF-G Data Sheet: Dual Port 1 Gb Ethernet XMC (front LC optical)

XGE4044 XMC

The XGE4044-XMC provides 1 Gb Ethernet (1GbE) connectivity for embedded systems with the ultra-high performance characteristics that are essential for data intensive real-time systems. It provides high performance RDMA and Streaming protocol in addition to 100% compatibility and interoperability with all industry standard Ethernet infrastructures and protocols.

The XGE4044-XMC provides a dual port 1 GbE TOE XMC with a PCIe x8 host interface. The XGE4044 offloads TCP/IP, RDMA, and UDP Direct Stream protocols to dedicated silicon protocol engines with each port capable of 250 MB/s of sustained throughput.

XGE Hardware Offload Advantage

Ethernet interfaces can stifle the performance of even the most powerful embedded CPUs when trying to move data at high rates at full wire speed. This is due to the significant overhead caused by the TCP/IP protocol stack (i.e. "software stack") in traditional Ethernet implementations. This problem gets many times worse when attempting to leverage the performance of 1 GbE. The XGE series offloads most of the network protocol processing to dedicated silicon protocol engines and frees the I/O protocol processing from the host CPU. The XGE product family differentiates itself from typical Ethernet NICs by delivering high sustained throughput, maximum host processor offload, ultra-low latency, and solid deterministic behavior.

UDP Direct Stream Support

UDP Direct Streaming send/receive allows extremely efficient large sends and receives of UDP data directly from application level buffers, completely avoiding the standard O/S network stack and associated data copies. The application send/receive buffers may be located in host CPU memory, or in any other PCIe addressable memory, such as the memories attached to PCIe connected Graphic Processing Units (GPUs). UDP Direct Streaming is fully compatible with standard UDP.

RDMA Support

When used in conjunction with a Data Center Ethernet (DCE) switches, XGE Interfaces supports the Ethernet Remote Direct Memory Access (RDMA) protocol. RDMA allows data movement directly between application memories without any CPU involvement. RDMA provides a mechanism for extremely efficient data transfer with ultra-low microsecond level board to board latencies on DCE enabled Ethernet networks.

XGE4044-XMC-FF-G Features:

- Dual Port 1 GbE interface
- XMC with PCIe x8 host interface
- Simultaneous line rate throughput on both ports
- UDP direct streaming support
- RDMA support (with DCE enabled switches)
- 100% standard Ethernet compatibility
- Standard Sockets programming interface
- Highly efficient large send/receive offload
- Very low host processor overhead
- Ultra low latency and high determinism
- Zero Copy / Direct Data Placement (into app memory)
- Very low power consumption
- Air and rugged conduction cooled versions available
- Software drivers for Linux, VxWorks, and Windows
- XGE4044 drivers also support legacy XGE4040 XMC

Extensive Software Support & Capability

Critical I/O supplies all the hardware, drivers, libraries, and protocol support you'll need for rapid system development without wasting your time debugging drivers. All software has been highly optimized to deliver maximum performance, reliability, and capability.

The XGE4044 hardware is accompanied by an extensive offering of software libraries and device drivers with support for a multitude of embedded / real-time operating systems as well as mainstream OS platforms (VxWorks, Linux, and Windows).

Compatibility

The XGE interface provides 100% standard 1 Gb Ethernet connectivity. The XGE sockets interface model maintains full compatibility with all applications, including both custom user applications as well as "pre-built" network applications such as NFS, FTP, Telnet, etc..

XGE4044 XMC (dual front panel optical) Technical Specifications

| | |
|---------------------------|---|
| Controller Architecture | Hardware protocol offload processor |
| Ethernet Rates | 1 Gbps/port |
| Data Transfer Rate | 250 MB/s (per port, full-duplex) |
| Topology | Switched & point to point |
| Protocol Support | TCP, UDP, IP, UDP Direct Streaming, RDMA, all other standard network protocols |
| Host Bus Interface | PCI-Express x8 (x8, x4, x2, x1 supported), PCIe 2.0 (1.1 compatible), 5GT/s or 2.5GT/s |
| Ports | Two optical 1000Base-SX front panel ports |
| Connectors | Two SFP+ optical transceivers (LC connectors) |
| Form Factor | XMC, VITA 42.0, VITA 42.3 VITA 61 XMC2 connectors available |
| Power Requirements | +5VDC at 3.0A (max) or +12VDC at 1.5A (max) |
| Power Consumption | 10.0 Watts (typical) |
| Temperature | Std: Operating: 0C to +55C; Storage: -40C to +85C ET1: Operating: -40C to +71C; Storage: -40C to + 85C |
| Humidity | 10-90% non condensing |
| Supported Host Processors | Intel, PowerPC |
| Vibration (random) | VITA 47 Class V2: 0.04g ² /Hz peak (5-2000 Hz) |
| Shock | VITA 47 Shock Class OS1: 20g Peak sawtooth (11ms duration) |
| Software Support | Drivers: VxWorks, Linux, Windows (protocol support varies by OS, contact Critical I/O) |
| Base Model Numbers | XGE4044-XMC-FF-G (VITA 42 XMC connectors) XGE4044-XMC6-FF-G (VITA 61 XMC2 connectors) |
| Model Description | Dual ported 1 Gigabit Ethernet TOE XMC, front LC optical, commercial temp, air-cooled hardware, RoHS LEAD FREE assembly |

Block Diagram: Functional block diagram for the XGE4044 XMC by Critical I/O. This XMC provides two independent 1 Gb Ethernet ports, each with integrated protocol offload hardware. Dedicated hardware offload provides full duplex operation at wire-speed, up to 250 MB/s (per port).
